Data Integration Process

Following are the steps to the data integration process which is required in order to establish a successful and timely connection to the Louisiana Service Reporting Systems (LaSRS®) Electronic Visit Verification (EVV) system.

1) Statistical Resources Inc. (SRI) will send your EVV provider three (3) files:

- a **client file** containing demographic information for the participants linked to your agency,

- a **Prior Authorization (PA) file** containing the PAs for the participants linked to your agency, and

- a **service message file** which will be generated once you begin entering provided services. This file will show you any deductions and the reasons for the deductions.

2) You will be required to send SRI two (2) files:
- a file of the services delivered and
- a file containing the names of the direct support workers (DSWs) and your agency's EVV system users.

The EVV Bridge Data Elements excel document, attached, contains the required file formats for the five (5) files described above. If the files are not formatted as shown on the attachment, they will not be considered valid files.
